

3D PRINTING

Allen Wolff
KC7O

9 January 2018

Definitions

- ***Subtractive Manufacturing***
 - ***i.e. machining***
- ***Additive manufacturing***
 - ***A process for making a physical object from a three-dimensional digital model, typically by laying down many successive thin layers of a material***

<https://3dprinting.com/what-is-3d-printing/#How-Does-3D-Printing-Work>

A Taste of 3D Printing

- ***Limited experience***
 - ***First involvement – June 2016***
- ***Some hints that helped me***
- ***How to get started***
- ***You'll be working and thinking in Metric Units!***

- ***BTW, you will make a lot of scrap***

Get used to it 😊

Basics

- ***Mechanisms***
 - ***Ink Jet printers***
 - ***3D printers***
- ***Software***
 - ***Design***
 - ***Slicing***
- ***Process***
- ***Examples***

Mechanisms

- ***I will concentrate on simple hobby machines***
- ***How they work***

Similarities with Inkjet Printers

<http://www.photocopier.org.uk/wp-content/uploads/2011/03/ink-and-ribbon-how-it-works3.png>

<http://www.bus.umich.edu/KresgePublic/Journals/Gartner/research/90500/90582/90582.html>

Tool path and areas where material is not deposited

Machines & Costs

- ***Based on size and complexity***
 - ***Single or multiple filaments***
 - ***Many choices available***
 - ***Resolution***
 - ***\$\$\$\$\$***
- ***Professional to Hobby***

Machines & Costs

- ***Based on complexity***
 - ***Single or multiple filaments***
 - ***Many choices available***
 - ***Resolution***
 - ***\$\$\$\$\$***
- ***Wanhao Duplicator I3***
 - ***Monoprice Maker Select 3D v2***
 - ***8" x 8" x 7" high max part size***
 - ***~ \$300*** (7/17)
 - ***Easy to upgrade & improve***
 - ***~250 Watts using μ SD card***

Filament Holder

Controller & Power Supply

Extruder & Fans

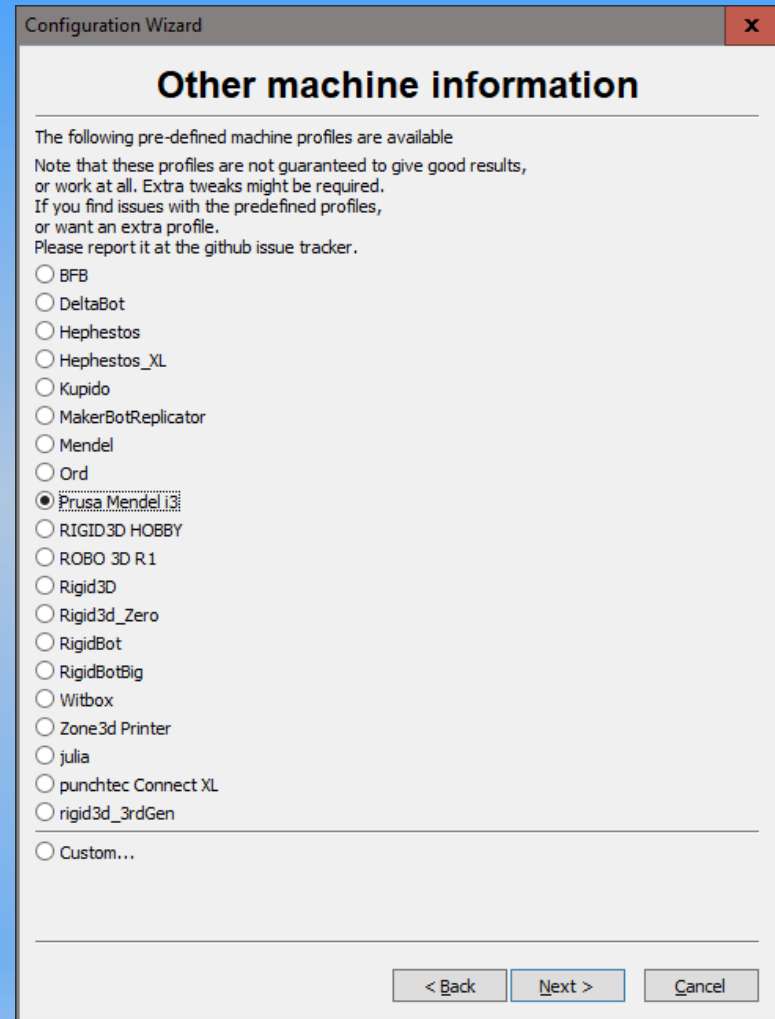

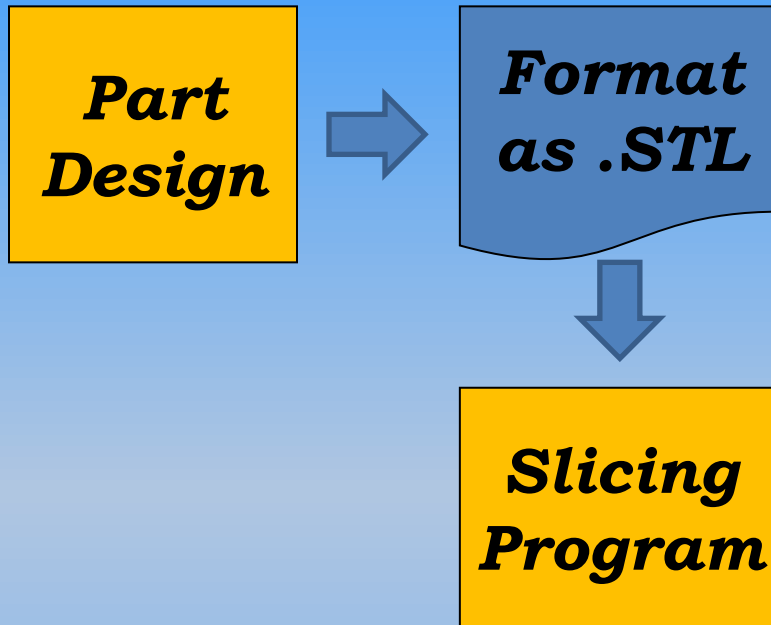

Heated Build Plate

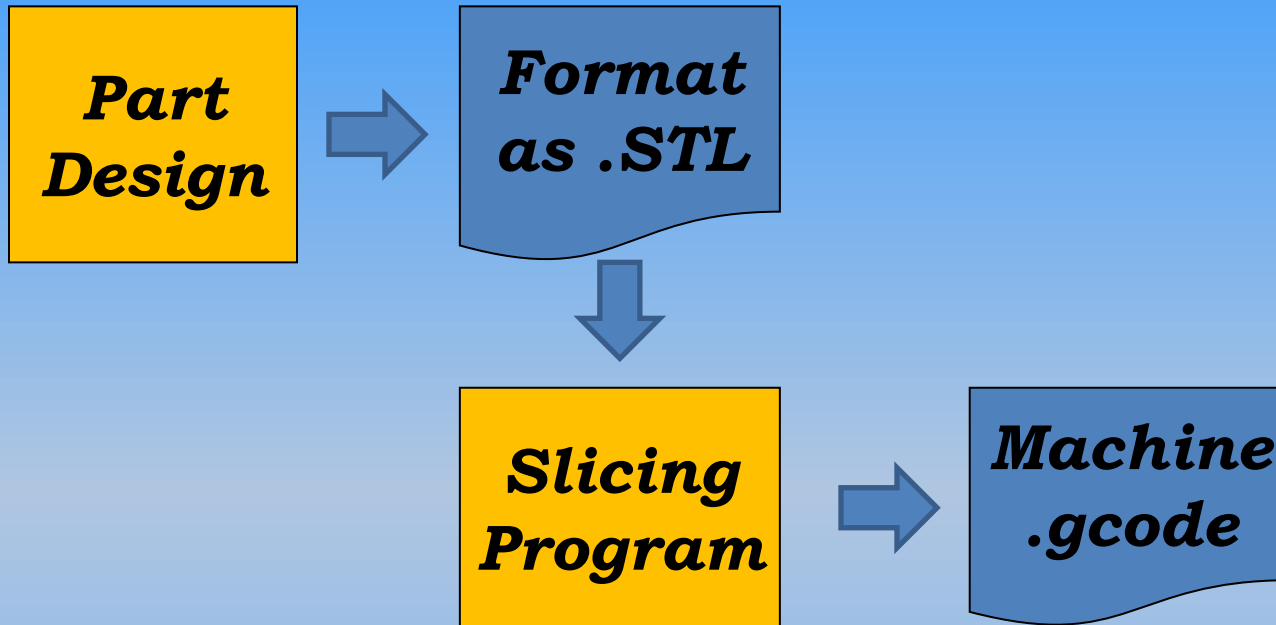

Process

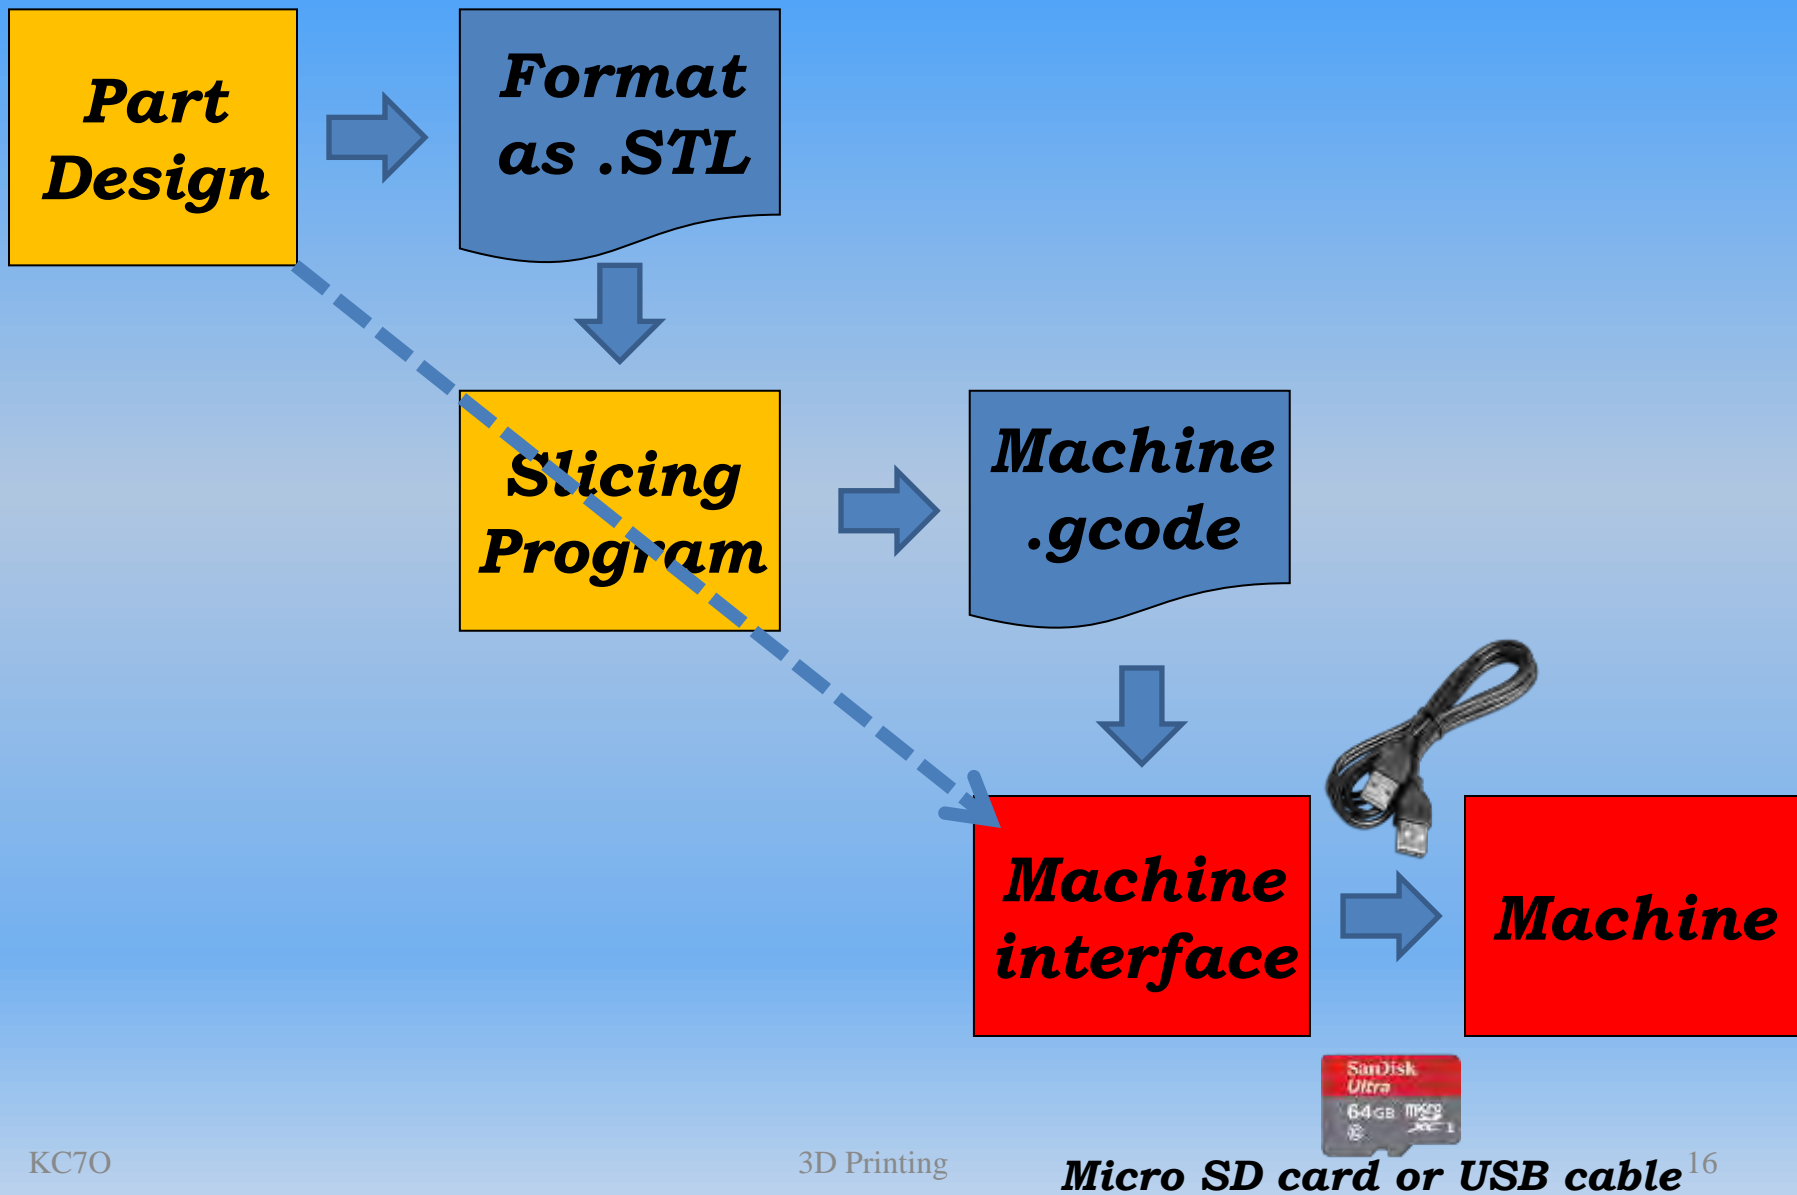

Process

Process

Process

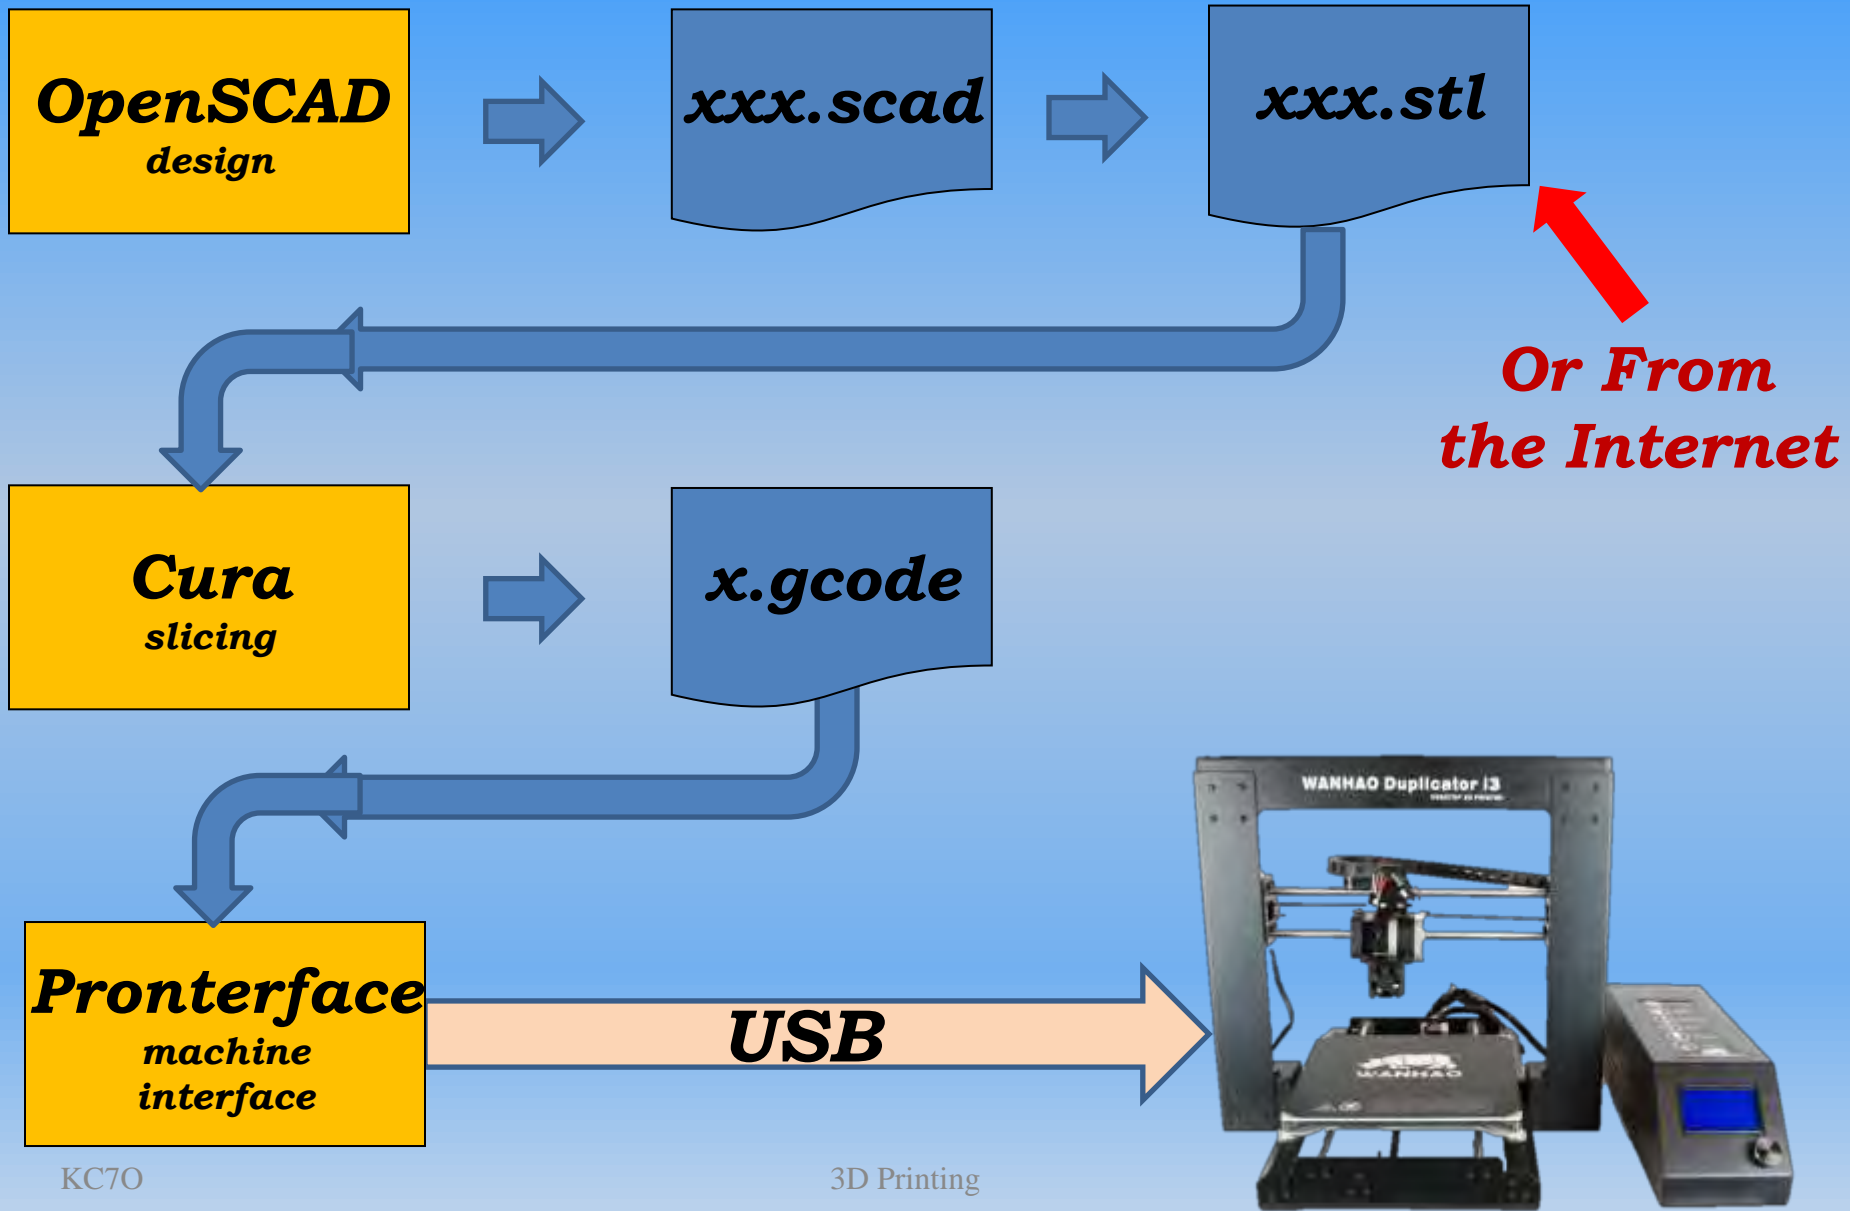

Design Software

- ***Part design***
 - ***Autocad*** ***\$\$\$\$\$***
 - ***Solid Works*** ***\$\$\$\$\$***
 - ***SketchUp*** ***Free***
 - ***3dslash*** ***Free***
 - ***123D Design*** ***Free***
 - ***DesignSpark*** ***Free***
 - ***Mechanical***
 - ***FreeCAD*** ***Free***
 - ✓ – ***OpenSCAD*** ***Free***

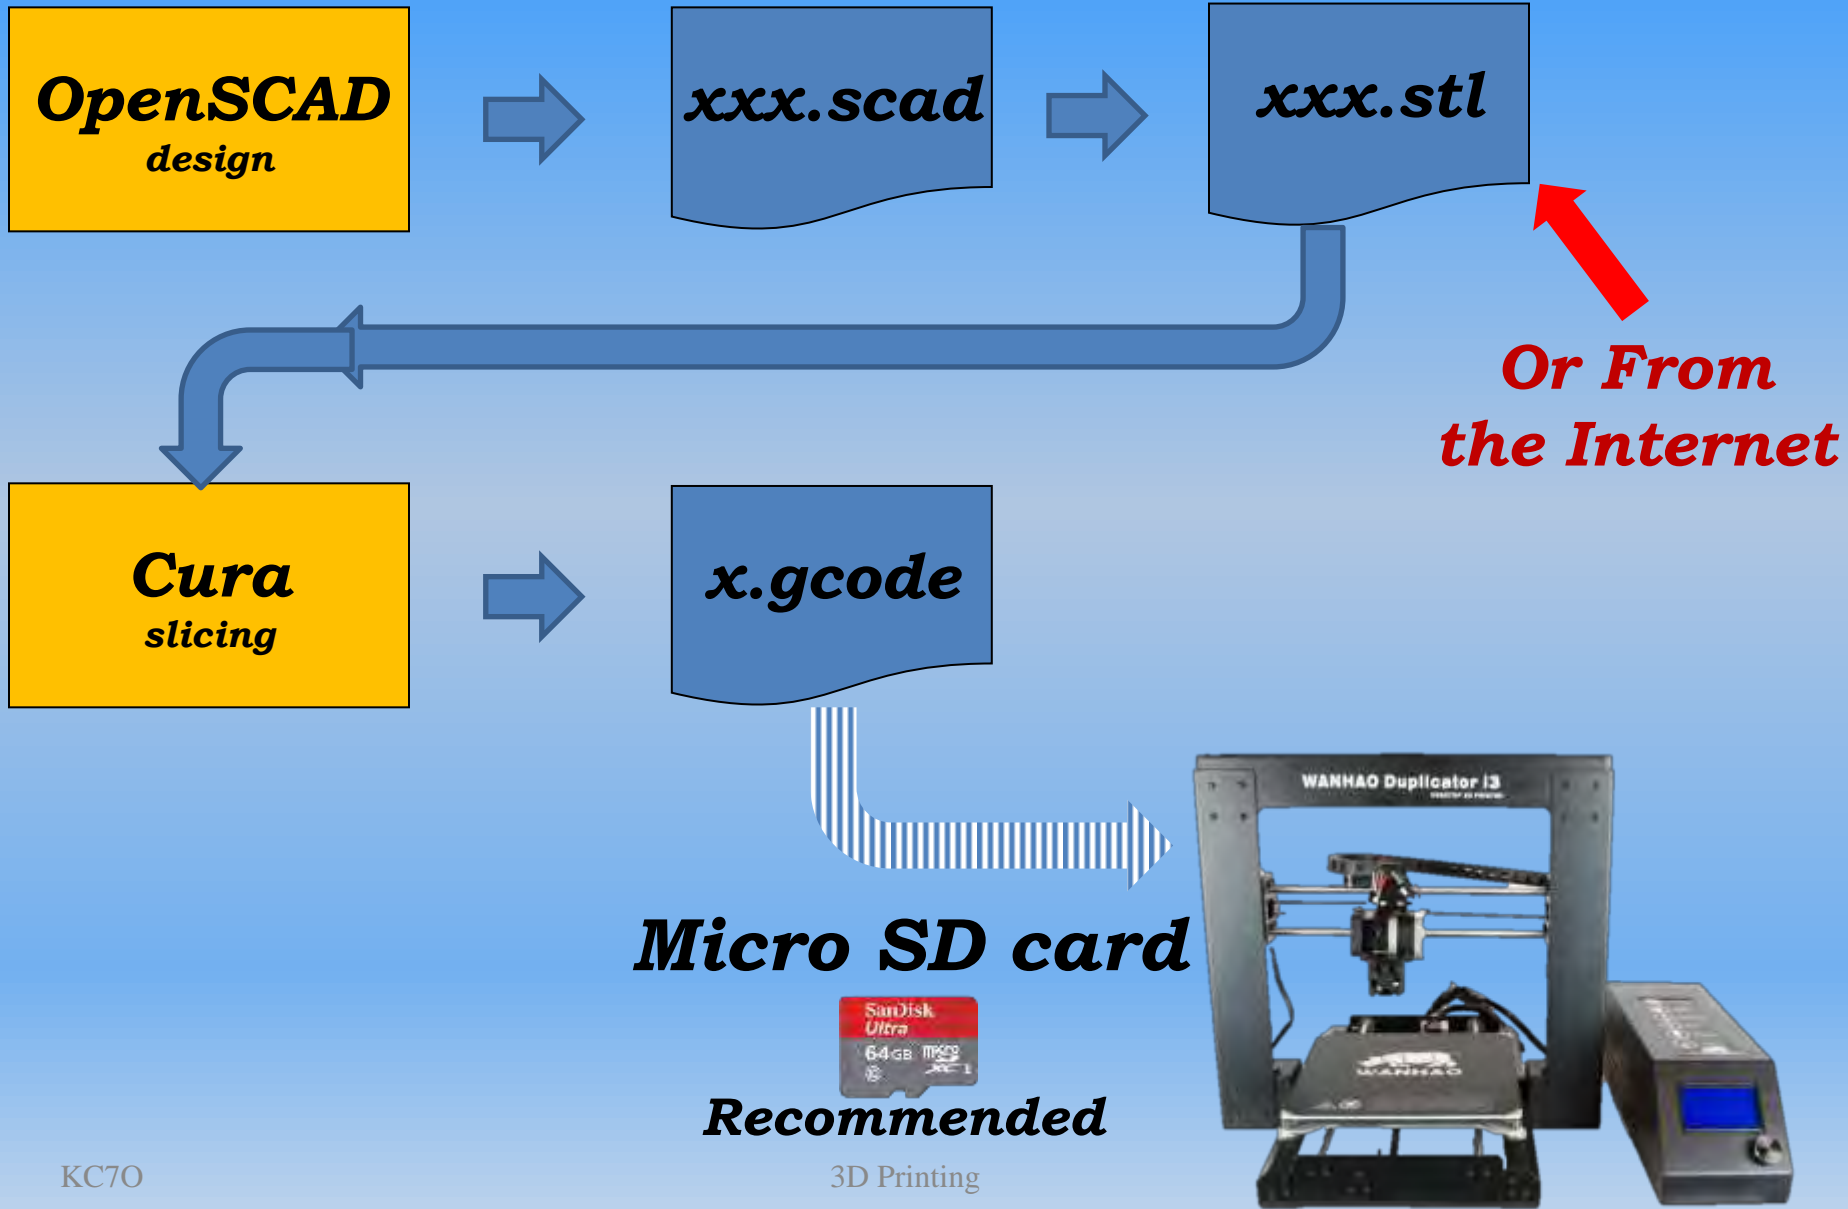

Export Formats

- ***3D solid formats:***
 - ***DWG, DXF, 123DX, SAT, STEP***
- ***3D mesh formats:***
 - ✓ – ***STL, VRML, X3D***
- ***STL - STereoLithography***
 - ***Files are the most common***
 - ***This format only describes the surface geometry of the object, and can't store properties like color or texture***
 - ***This is generally ok when printing in one color***

Programs

Programs

gcode

- *The line by line code that defines the printers tool path & operation*
- *Created by slicing program (i.e. Cura)*
- *Not necessary to know!*
- *Just for information*
- *Goes on for ten's of thousands of lines*

Machine Components

(Wanhao Duplicator I3)

- ***0.4 mm nozzle***
 - ***0.01575" ~ 5 times a hair diameter***
- ***Hot end with nozzle***

***Heater &
Thermocouple***

Machine Components

(Wanhao Duplicator I3)

- **Hot Bed**

Materials

- ***Usually 1 Kg spools***
 - ***~\$25 - \$30***
 - ***I use Hatchbox – 1.75 mm***
 - ***~ 330 meters or 1080 feet***
- ***Available in multiple colors and materials***

Materials

- ***Come in 1 Kg spools***
 - ***~\$25 - \$30***
 - ***I use Hatchbox – 1.75 mm***
 - ***~ 330 meters or 1080 feet***
- ***Comes in multiple colors***
- ***Types***
 - ***PLA***
 - ***ABS***
 - ***Wood***
 - ***Nylon***
- ***Quality of the filament is critical***

Common Materials

- **PLA - Polylactic acid** 
 - **Easy to Print**
 - **Biodegradable & Nontoxic**
 - **Porous (clear coat to water proof)**
 - **Should be kept dry (as with all filaments)**
 - **I use Home Depot Buckets & covers with desiccant**
 - **The filaments come with desiccant packs**

Common Materials

- ***ABS - Acrylonitrile Butadiene Styrene***
 - ***Durable, Impact Resistant***
 - ***Warpage***
 - ***Smells***
 - ***Inhalation issues***
 - ***Heating may release vapors which may be irritating***
- ***Wood***
 - ***Wood fibers in PLA***
- ***Nylon***
 - ***Strong, Flexible, Durable***
 - ***Harder to work with***

KC70

<u>PLA - Polylactic acid</u>	Easy to Print, Biodegradable
<u>ABS - Acrylonitrile Butadiene Styrene</u>	Durable, Impact Resistant
<u>PETG (XT, N-Vent)</u>	Flexible, Durable
<u>nGen</u>	Like PETG, but Easier to Print, Heat Resistant, Transparent
<u>Flexible, TPE, TPU</u>	Extremely Flexible, Rubber-Like
<u>TPC</u>	Extremely Flexible, Rubber-Like, Chemical-/ Heat-/ UV Resistant
<u>HIPS</u>	Disolvable, Biodegradable
<u>PVA</u>	Disolvable, Water Soluble, Biodegradable, Oil Resistant
<u>Wood PLA</u>	Wood Finish
<u>Nylon</u>	Strong, Flexible, Durable
<u>PET (CEP)</u>	Strong, Flexible, Durable, Recyclable
<u>Carbon Fiber PLA</u>	Rigid, Stronger Than Pure PLA
<u>Metal PLA</u>	Metal Finish
<u>PC Polycarbonate</u>	Strongest, Flexible, Durable, Transparent, Heat Resistant
<u>Conductive PLA</u>	Conductive
<u>ASA</u>	Rigid, Durable, Weather Resistant
<u>PP</u>	Flexible, Chemical Resistance
<u>PETT (T-Glase)</u>	Strong, Flexible, Transparent, Clear
<u>POM, Acetal</u>	Strong, Rigid, Low Friction, Resilient
<u>Glow-In-The-Dark PLA</u>	Luminous, Flourescent
<u>Wax (MOLDLAY)</u>	Melts Away
<u>PMMA, Acrylic</u>	Rigid, Durable, Transparent, Clear, Impact Resistant
<u>PC/ABS</u>	Rigid, Durable, Impact Resistant, Resilient, Deflecting Heat
<u>Cleaning</u>	Cleaning
<u>Magnetic Iron PLA</u>	Magnetic
<u>Sandstone (LAYBRICK)</u>	Sandstone Finish
<u>Color Changing PLA</u>	Changes Color

Temperatures Based on Materials

- ***PLA (recommended initially)***
 - ***Hot End – Extrusion/Nozzle***
 - ***210°C (180°C - 210°C) => (356°F - 410°F)***
 - ***Hot Bed***
 - ***Not heated or 70°C***
 - ***Experimentation***
- ***ABS***
 - ***Hot End – Extrusion/Nozzle***
 - ***230°C (210°C - 240°C) => (410°F - 464°F)***
 - ***Hot Bed***
 - ***70°C (55°C - 85°C) => (131°F - 185°F)***
 - ***Experimentation***

YOUR CREATIVITY, OUR TOOLS.

Bed Adhesion

None – no additional material

Brim

Raft

Bed Adhesion

Sometimes too much!

ABS

KC70

Bed Adhesion

Sometimes breaks loose!

PLA

Printer Adjustments

- ***Printer bed must be level***
- ***Extruder should be one to two paper thickness away from bed across the build area – depending on the bed***
- ***Prints always start from “Home”***
 - ***X=0, Y=0, Z=0***
 - ***Front left***
- ***Bed temperatures critical for each material & type of bed material***

Part Adherence to Bed

- ***Methods:***
 - ***Print on Blue painters tape***
 - ***Adhesives to hold part – glue stick***
 - ***Acqua-Net hair spray***
 - ***Mylar tape***
 - ***Borosilicate Glass Beds***
 - ✓ – ***print plates***

Part Removal

- ***Scraper*** 
- ***Care not to harm the print surface***
- ***Another reason to use a replaceable surface on the bed***

Cleaning

- ***91% Isopropyl Alcohol and a clean rag***
- ***70% pads ok too***

Problems

- ***Clogged nozzle***
- ***Models not adhering***
- ***Warping***
 - ***Bed temperature adjustment***
 - ***Head to bed alignment***

Shrinkage

Test_Cube_Shrinkage.scad - OpenSCAD

File Edit Design View Help

Editor

```
1 // 1 inch block - shrinkage
2 //KC70 - 20Sept2017
3 $fn=63;
4 difference() {
5   cube([25.4,25.4,5]);
6
7   translate([12.7,12.7,0])
8     cylinder(10,6.35,6.35);
9 }
```

OpenSCAD

Diameter = 2 X 6.35 or 12.7

The topic of this year's Google Summer of Code project is...

3 Mar 2016

Google Summer of Code 2016

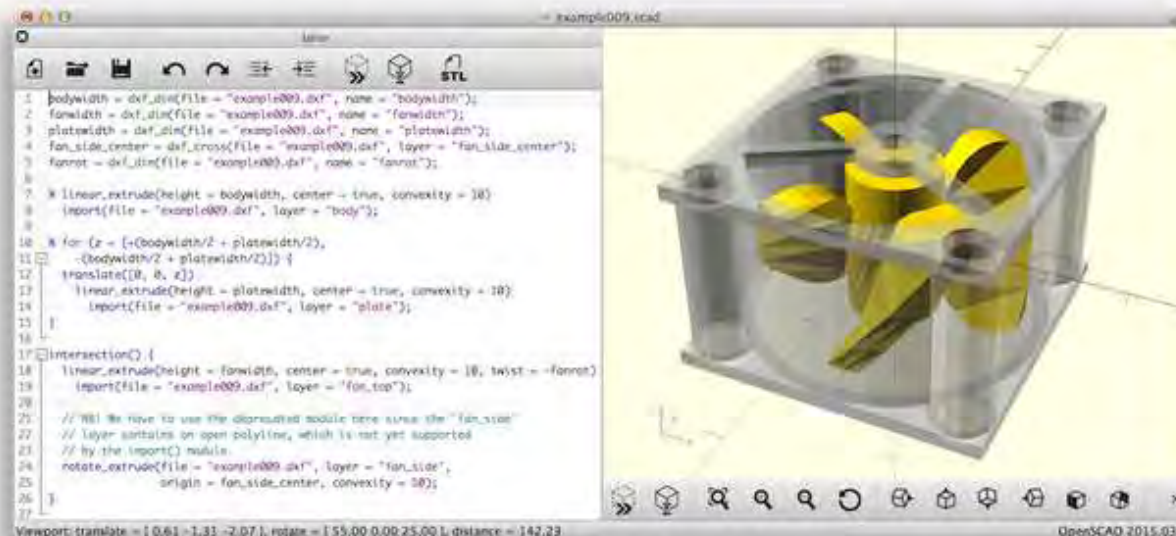

OpenSCAD, in collaboration with
KC7O

10 Mar 2015

OpenSCAD is a software for creating solid 3D CAD objects.

It is free software and available for Linux/UNIX, MS Windows and Mac OS X.

**Download OpenSCAD****OpenSCAD 2015.03-2 Windows**[Other OSs and Versions](#)

Example

- *Appeared in CQ Magazine*
 - *October 2016 – PC Board Build Supports*
 - *“A Brass Set” from QRPme.com*
 - *Issue – they are brass so you can’t power and test your project – potential shorts*

A Better Idea!

***Design It &
Print It!***

***The process from
idea to part***

```

1
2 $fn=30;
3 rotate([0,90,0])
4 scale([1.2,1.2,1.2]){
5 translate([-12.5,0,2]){
6 //difference() {
7 cube ([10,2,10]); ←
8 //rotate([90,0,0])
9 //translate([5,5,-7])
10 //cylinder(10,2,2);
11
12 //}
13
14 }
15 }

```

OpenSCAD

Start with a cube

Console

```

Geometries in cache: 5
Geometry cache size in bytes: 7184
CGAL Polyhedrons in cache: 0
CGAL cache size in bytes: 0
Compiling design (CSG Products normalization)...
Normalized CSG tree has 1 elements
Compile and preview finished.
Total rendering time: 0 hours, 10 minutes, 10 seconds

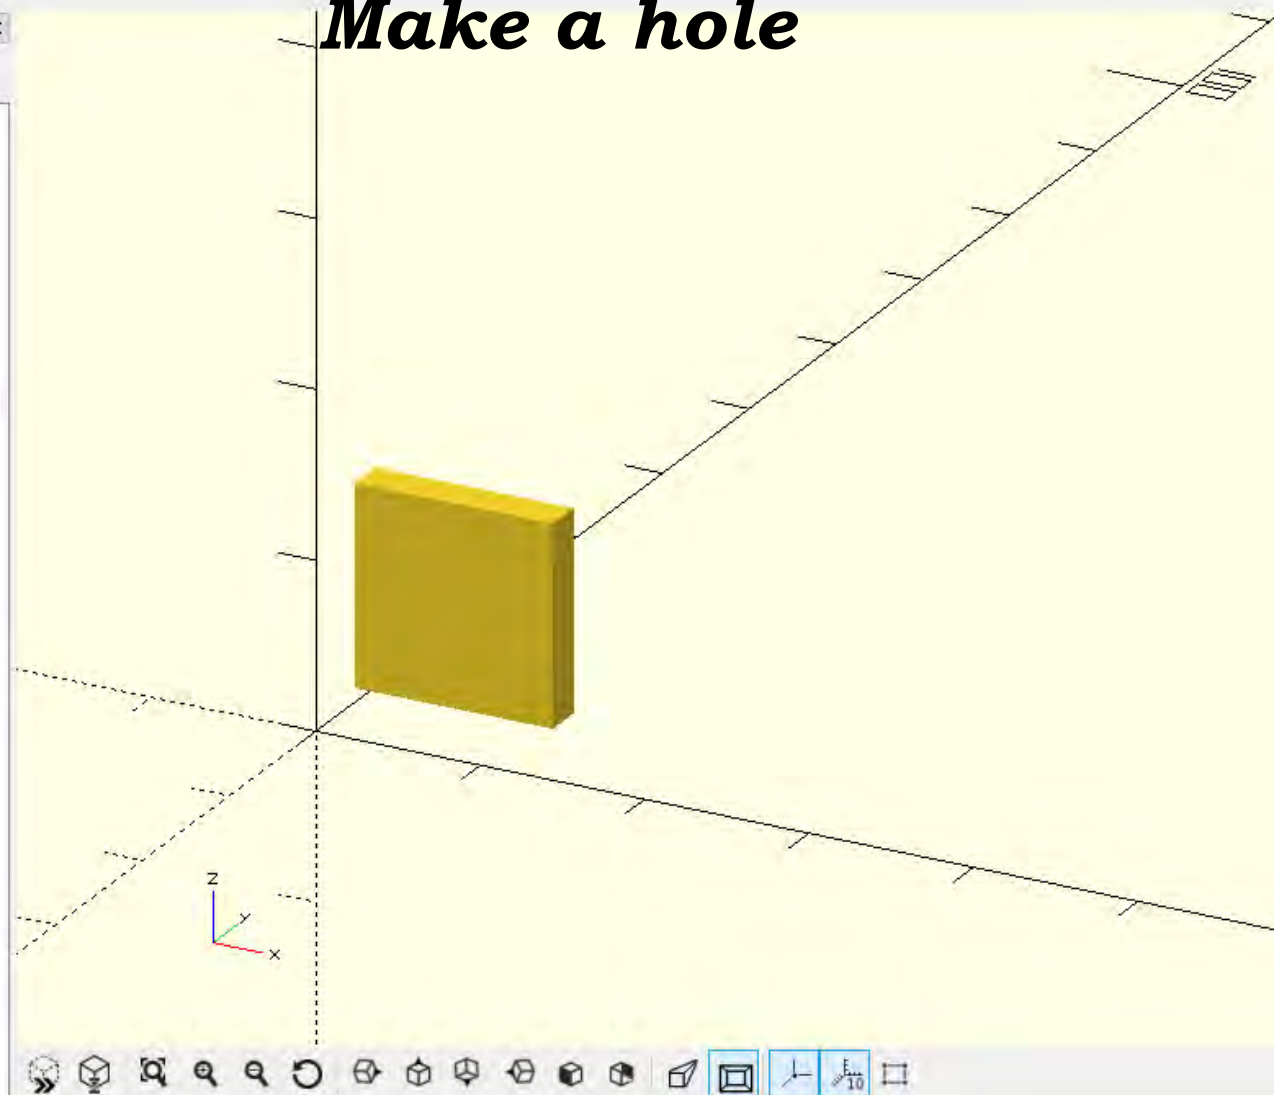

```

Make a hole

```

File Edit Design View Help
Editor
1
2 $fn=30;
3 rotate([0,90,0])
4 scale([1.2,1.2,1.2]){
5 translate([-12.5,0,2]){
6 //difference() {
7 cube ([10,2,10]);
8 //rotate([90,0,0])
9 //translate([5,5,-7])
10 //cylinder(10,2,2);
11
12 //}
13
14 }
15 }

```

Console

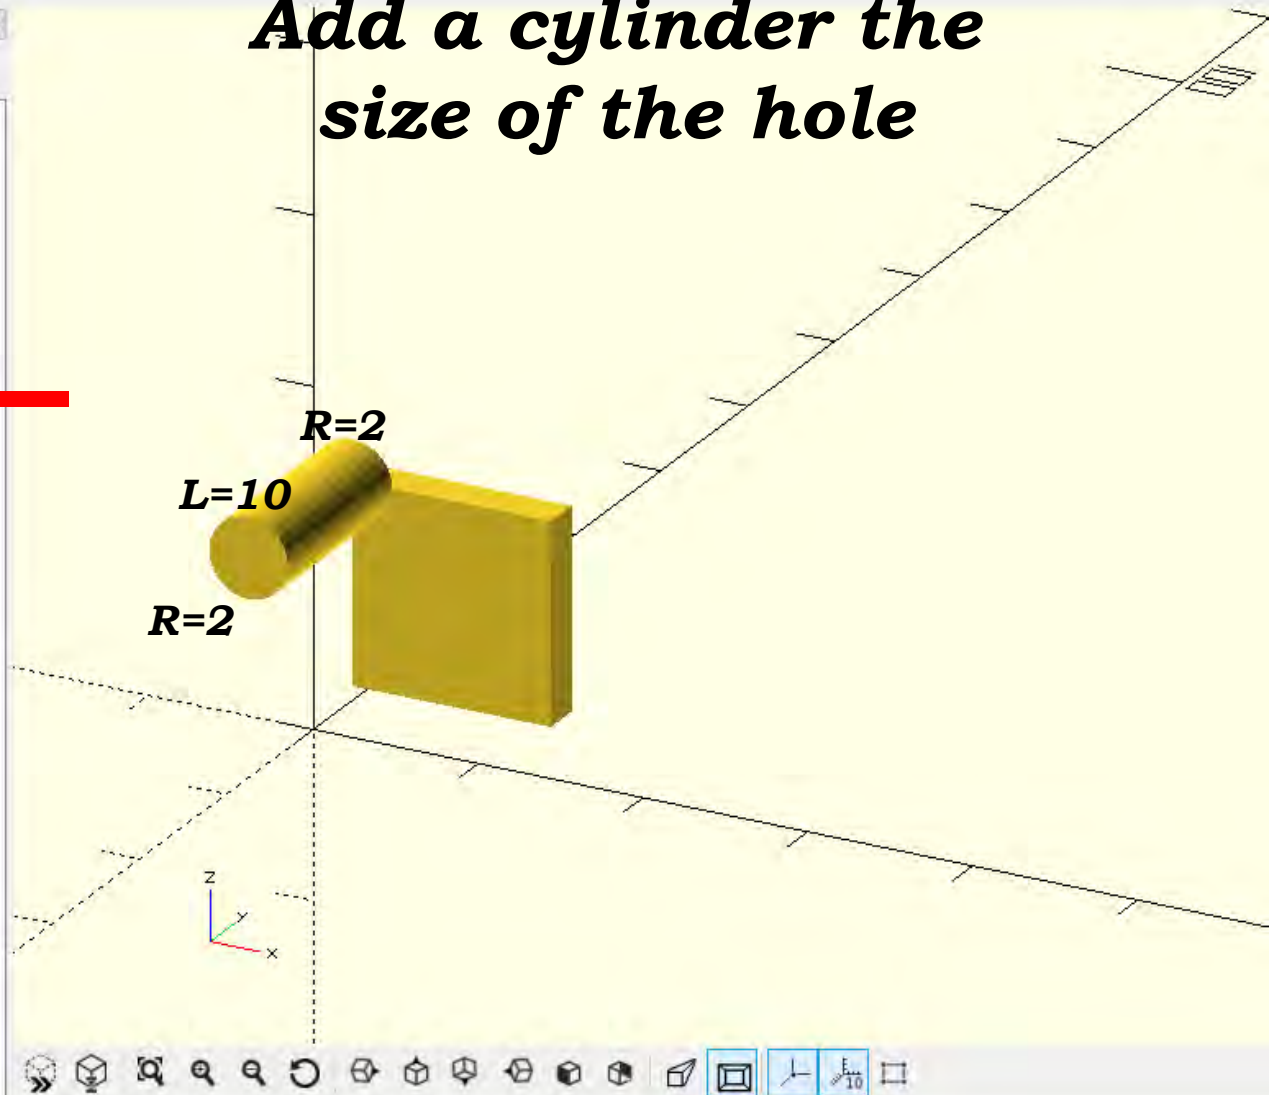

Geometries in cache: 5
 Geometry cache size in bytes: 7184
 CGAL Polyhedrons in cache: 0
 CGAL cache size in bytes: 0
 Compiling design (CSG Products normalization)...
 Normalized CSG tree has 1 elements
 Compile and preview finished.
 Total rendering time: 0 hours, 0 minutes, 0 seconds

Add a cylinder the size of the hole

```

1
2 $fn=30;
3 rotate([0,90,0])
4 scale([1.2,1.2,1.2]){
5 translate([-12.5,0,2]){
6 //difference() {
7 cube ([10,2,10]);
8 rotate([90,0,0])
9 //translate([5,5,-7])
10 cylinder(10,2,2);
11 //}
12 }
13 }
14 }
15 }

```

```
1
2 $fn=30;
3 rotate([0,90,0])
4 scale([1.2,1.2,1.2]){
5 translate([-12.5,0,2]){
6 //difference(){
7 cube ([10,2,10]);
8 rotate([90,0,0])
9 translate([5,5,-7])
10     cylinder(10,2,2);
11 //}
12 }
13
14 }
15 }
```

***Translate the cylinder
to where you want the hole***

Console

```
Geometries in cache: 5
Geometry cache size in bytes: 7184
CGAL Polyhedrons in cache: 0
CGAL cache size in bytes: 0
Compiling design (CSG Products normalization)...
Normalized CSG tree has 2 elements
Compile and preview finished.
Total rendering time: 0 hours, 0 minutes, 0 seconds
```

```
1
2 $fn=30;
3 rotate([0,90,0])
4 scale([1.2,1.2,1.2]){
5 translate([-12.5,0,2]){
6 difference() {
7 cube ([10,2,10]);
8 rotate([90,0,0])
9 translate([5,5,-7])
10     cylinder(10,2,2);
11 }
12 }
13
14 }
15 }
```

Use the *difference()* function

Console

```
Geometries in cache: 5
Geometry cache size in bytes: 7184
CGAL Polyhedrons in cache: 0
CGAL cache size in bytes: 0
Compiling design (CSG Products normalization)...
Normalized CSG tree has 2 elements
Compile and preview finished.
Total rendering time: 0 hours, 0 minutes, 0 seconds
```

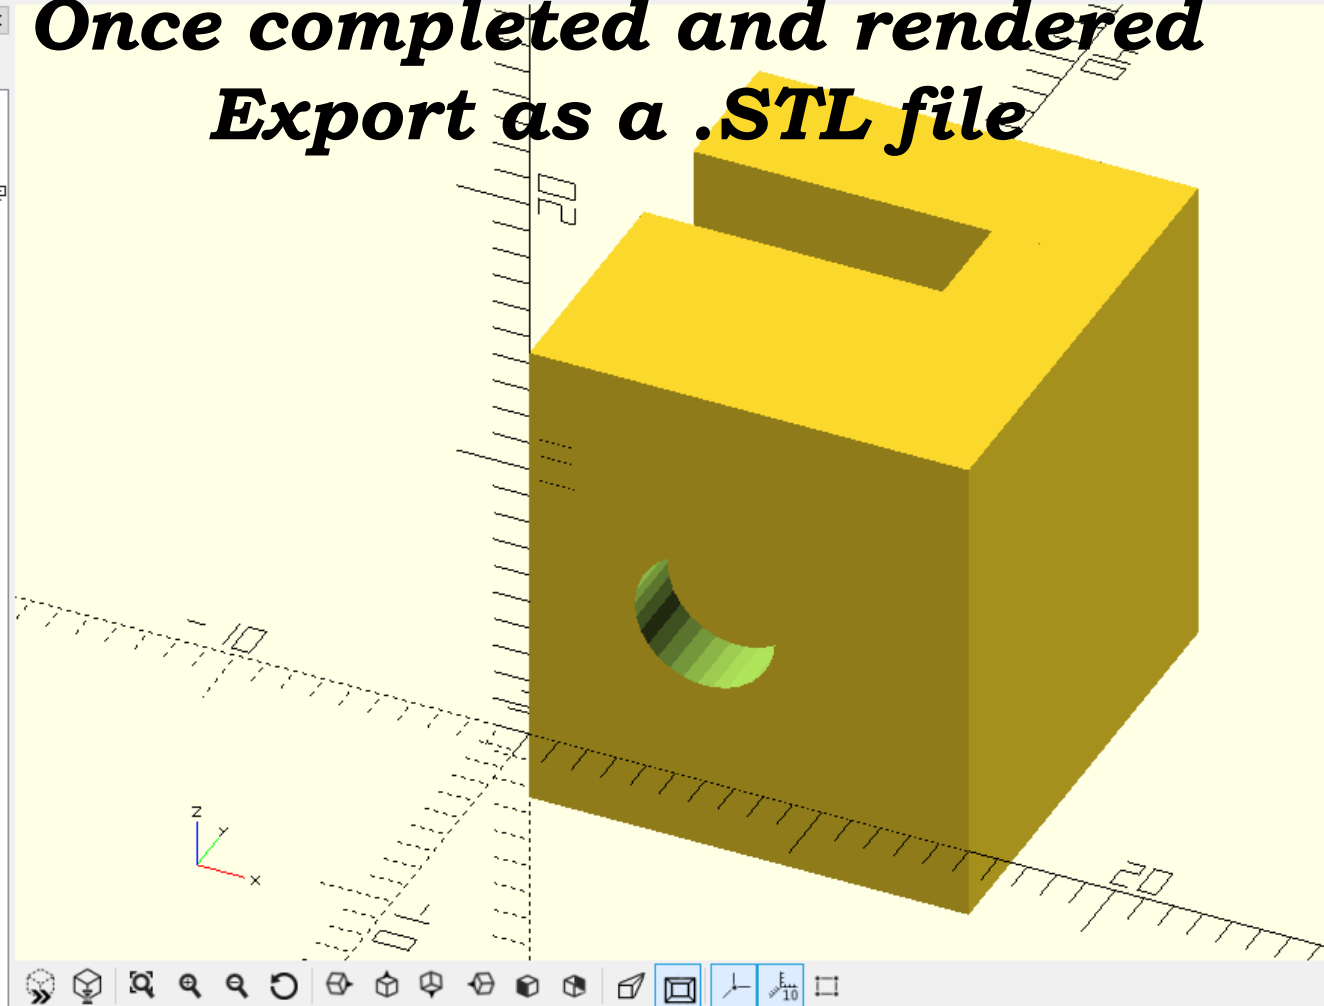

```

1 //PC Board Feet
2 //Use #8 nylon nut and 3/4" screw
3 //A. Wolff
4 //Original idea from "A Brass
  Set" qrpme.com
5 //70% fill, 0.2 layer
6 //210 & 70 deg C - raft
7 $fn=30;
8 scale([1.2,1.2,1.2]){
9   difference(){
10    cube([10,2,10]);
11    rotate([90,0,0])
12    translate([5,5,-7])
13    cylinder(10,2,2);
14  }
15  difference(){
16    translate([0,5,0])
17      cube([10,2,10]);
18    rotate([90,0,0])
19    translate([5,5,-7])
20    cylinder(10,2,2);
21  }
22  translate([8.5,0,-2])
23  cube([4,12,14]);
24  translate([0,10,-2])
25  cube([12.5,4,14]);
26  translate([0,0,-2])
27  cube([10.5,7,2]);
28  translate([0,0,10])
29  cube([10.5,7,2]);
30 }

```

Once completed and rendered
Export as a .STL file

Console

```

Compiling design (CSG Tree generation)...
Compiling design (CSG Products generation)...
Geometries in cache: 5
Geometry cache size in bytes: 7184
CGAL Polyhedrons in cache: 0
CGAL cache size in bytes: 0
Compiling design (CSG Products normalization)...
Normalized CSG tree has 8 elements

```

First print failure
15% fill
.3 mm

Ingredients

Sodium Fluoride 0.24% (0.15% w/v fluoride ion)
Triclosan 0.30%

Uses aids in the prevention of: • cavities • plaque • gingivitis

Warnings Keep out of the reach of children under 6 years of age. If more toothpaste is brushed than recommended, or if toothpaste is accidentally swallowed, get medical help or contact a Poison Control Center right away. **Ask a dentist before use if you have** • bleeding or redness lasting more than 2 weeks • pain, swelling, pus, loose teeth, or more spacing between teeth. These may be signs of periodontitis, a serious form of gum disease.

Benchy

for Benchmark

Calibration and torture-test for 3D printers

The front and rear surfaces of the roof are parallel at a distance of 23.00 mm.

The cylindrical hole and outer top part of the chimney measure 3.00 and 7.00 mm in diameter. The depth of the blind hole measures 11.00 mm.

#3DBenchy's horizontal overall-length from bow to stern measures 60.00 mm.

#3DBenchy's horizontal overall-width from port to starboard measures 31.00 mm.

#3DBenchy's vertical overall-height from top to bottom measures 48.00 mm. The top of the box measures 15.50 mm above the bottom surface.

The box on #3DBenchy's deck measures 12.00 x 10.81 mm on the outside and 8.00 x 7.00 mm on the inside. The depth measures 9.00 mm.

The inner diameter of #3DBenchy's hawsepipe measures 4.00 mm. The depth of the flange against the hull is 0.30 mm.

The rectangular front window measures 10.50 x 9.50 mm. Its parallel inner surfaces are horizontally cut into the bridge.

The inner diameter of the cylindrical stem window measures 9.00 mm. Its outer diameter measures 12.00 mm. The flange's depth is 0.30 mm.

#3DBenchy's high-cabin spoon bow has a 40° overhang angle to the horizontal plane.

The roof of the bridge slopes at a 5.5° angle to the horizontal plane.

The sign and small letters at the stern are extruded at 0.10 mm.

Lithophane

- ***French - is an etched or molded artwork in very thin translucent porcelain that can only be seen clearly when backlit with a light source ~ 1820's***
- ***It is a design or scene engraved that appears in gray tones***
